Institutions and Sustainable Transport

Regulatory Reform in Advanced Economies

Edited by Piet Rietveld and Roger R. Stough
Contents

List of Contributors vii
Preface ix
1. Institutions and Regulatory Reform in Transport:
   An Introduction 1
   Piet Rietveld and Roger R. Stough

PART ONE  BARRIERS TO IMPLEMENTATION IN TRANSPORT 17
2. Making Sustainable Transport Politically and Publicly Acceptable: Lessons from the EU, USA and Canada
   David Banister, John Pucher and Martin Lee-Gosselin
3. Equity and Environmental Justice in Sustainable Transportation:
   Toward a Research Agenda 51
   Elizabeth Deakin
4. Successes and Failures in Innovations toward Sustainable Transport
   Jeroen C.J.M. van den Bergh, Eveline S. van Leeuwen,
   Frans H. Oosterhuis, Piet Rietveld and Erik T. Verhoef 70
5. US and European Responses to Uncertainty about Intelligent Transportation Systems: A Comparative Analysis
   Jonathan L. Gifford and Vincent Marchau 96

PART TWO  REGULATORY REFORM 111
6. Rail Reform in Europe: Issues and Research Needs
   Chris Nash and Cesar Rivera-Trujillo 111
7. US Railroad Productivity and Deregulation: A Brief Summary of Findings
   John D. Bitzan 141
8. Airlines: Sustainable Development in a Transatlantic Context
   Kenneth Button 155
9. Integration: An Instrument for Sustainability of Urban Mobility Systems 188
   Rosário Macário
10. Transport Pricing when Several Governments Compete for Transport Tax Revenue 211
    Bruno De Borger and Stef Proost

PART THREE  PUBLIC–PRIVATE COOPERATION 233

11. Public and Private Roles in Transport Network Development 263
    Steve Lockwood
12. Private Sector Finance of Transport Infrastructure: Progress and Prospects
    Roger Vickerman
    David Levinson, Reinaldo C. Garcia and Kathy Carlson

Index 305
Institutions and Sustainable Transport

'The book treats an important topic in a novel way. The novelty comes to a large extent from the format of having European researchers write together with researchers from North America on an applied topic. This setup provides some interesting perspectives on the differences in problem formulation and scientific analysis on the two sides of the Atlantic.'

– Folke Snickars, Royal Institute of Technology,
Stockholm, Sweden

'This excellent volume is a landmark in the challenging and multifaceted field of institutions and transport. It brings together the work of leading experts from Europe, the United States and Canada to provide a superb overview of transatlantic perspectives on the role of institutional change, regulatory reform and public–private cooperation in supporting efficiency, equity and sustainability, in various transport markets and networks. This prestigious book will serve as an illuminating source of ideas and insights for planners, policy makers and those working on the international research frontier, now and in the future.'

– Aura Reggiani, University of Bologna, Italy

'This is an outstanding and very needed work. Not only is it comprehensive, it links critical infrastructure to management institutions that are essential to its regulation and effective operations. Rietveld and Stough bring a new and fresh perspective to this centrally important issue. I would recommend the book not only to students and faculty but to the thoughtful practitioner who is interested in the broad issue of institutional sustainability in the light of infrastructure management. Transportation is the focus but the broad issues of institutions are the crux of the analysis. It is the best and most up-to-date work in the field that is empirically based.'

– Kingsley E. Haynes, George Mason University, USA
